# Mohammed Haseeb Tariq
**Web Developer**

+923065005416. | mohaseebtariq@gmail.com | Rawalpindi, Pakistan

## PROFESSIONAL PROFILE

A creative frontend Web developer with 2 years of experience in developing appealing user interfaces. I try to keep up with the latest trends, Passionate about learning new technologies, bringing ideas to life, and working to build efficient and robust applications suited to user's needs.

## EXPERIENCE

### Jr.Developer - Fantisco Technologies
- Developed a note taking application, using Angular framework for the company's client.
- worked on several other Frontend focused small projects like theme customization, and some basic web pages.

### Frontend Developer - Seerbytes
- I had the privilege of working for Seer bytes in a Front-end web developer role in my free time, where I learned valuable professional skills such as working in a team, web development using MEAN stack.
- I've worked on a social platform based web application, using Angular, Typescript, Sass.
- My key responsibilities in the company include communication with Backend team about API refinements and requirements.
- Work with designers to build highly usable UIs. Create the best possible UX in the web application. Write modular and maintainable code

## EDUCATION

### National University of Modern Languages
Bachelor of Computer Science – expected completion 2021

## PROJECTS

### Google Keep Clone
While, working at Fantisco Technologies I developed a fully functional and responsive Progressive Web Application, clone of famous note-taking app Google keep using Angular Framework, designed with popular CSS framework Bulma, including authentication with Google OAuth API, I saved notes in browser's IndexedDB and synced notes on Google Drive.

### Blogging API
I also like coding as a hobby. During my free time, I work on personal projects. I developed a blogging API using MEAN stack, with backend made using Express framework, with complete validation, route protection, including user authentication with JSON Web Token, with the API you can perform complete CRUD operations.

### NgLab (Web Builder)
At university I've built an AI based web builder along with my friends, using it one can build a website just with drag & drop, completely customize it and download the source code, its different from traditional builders because your Application is in angular, not just in regular html.
